

Bluetooth Luggage Lock | Keyless Operation | TSA Lock | Tracking | Rechargeable

General information

This Bluetooth-access padlock helps you restrict access to your belongings - and you can unlock it hands-free using your phone.

Gone are the days of having to search for lost keys to your padlock - today you can unlock it by using your phone as the key.

A clever app allows you to grant others access to unlock your belongings, using their Bluetooth-enabled phone. The app also keeps track of the padlock's position so that it can be detected using a smartphone.

The stainless steel and plastic coated cable of this padlock is sturdy and strong enough to protect your belongings, wherever you leave them.

Features

- Bluetooth-controlled padlock - hands-free access via Bluetooth 4.0 and a phone
- Share access with friends - using the free app
- Rechargeable battery (supplied) - offering 3 months use on a single charge
- Approved for international flights by TSA
