This Nedis SCBI9000BK digital night vision monocular can be used for (nature) observations, hunting, and water sports like boating and fishing. You can see everything sharp and bright. It is equipped with a 5x optical and 3x digital zoom and a 32 mm lens so the magnification can easily take something far away very close in view. It has a spectrum range of 450 - 1100 nm which allows you to distinguish the spectrum between this range.

Since no residual light is present in certain situations, the monocular is equipped with a built-in, freely adjustable infrared heater. The higher the infrared illumination level (max. 9), the greater the viewing distance. Of course, the viewer is provided with a manual focus function and diopter.

Features

- Multiple application options – for nature observations, hunting, navigation, survival, safari, and water sports like boating and fishing or more
- Magnification – depends on the setting (manual or automatic) it zooms 5x optical and 3x digital to the object
- 32 mm objective lens diameter - so enough light is let through the lens
- Eye-relief of 20-25 mm – makes it suitable for spectacle wearers
